1.1.3 FightPandemics DB Definitions

1.1.3.1 Field location

1.1.3.1.1 location Tree Diagram

1.1.3.1.2 location Hierarchy

Parent field:

Child field(s):

FIELD	TYPE	REQ	KEY	DESCRIPTION	COMMENTS
coordinates	array	true		Array with the coordinates, specifying longitude first and latitude second , as default in the GeoJSON definition.	
type	string	true		Type of the GeoJSON Object. Please refer to the official documentation for more information. In our case, the value will always be of the type "Point".	
country	string	false		String holding the country's name.	
city	string	false		String holding the city's name.	
neighborhood	string	false		String holding the neighborhood's name.	
address	string	false		String holding the address (street, number and other details).	

1.1.3.1.3 location properties

PROPERTY	VALUE
Name	location
Technical name	
Id	
Type	document
Description	Location document according to the norms of a GeoJSON Object . The fields address, neighborhood, city, state and country are added to store the result of the geoprocessing.
Dependencies	
Required	false
Primary key	false

2.1.2.2.3 feedbacks Fields

FIELD	TYPE	REQ	KEY	DESCRIPTION	COMMENTS

_id	objectId	true	Automatically generated object_id as primary key.
createdAt	date	true	Timestamp with the feedback's creation date
updatedAt	date	true	Timestamp with the feedback's last update date
rating	numeric	true	<p>A rating, in a scale of 1 to 5, of the application.</p> <p>Currently present as: "How well does FightPandemics meet your needs?".</p> <p>Present in the first part of the feedback and, therefore, is required.</p>
ipAddress	ipv4	true	<p>Caputred IP address in order to get user's location even if they are not logged.</p> <p>Captured at the first part of the feedback and, therefore, is required.</p>
age	integer64	false	<p>User's age.</p> <p>Currently present as: "What is your age?".</p> <p>Present in the third part of the feedback and, therefore, not required.</p>
mostValuableFeature	string	false	<p>User's feedback into what is the features most valuable for him/her.</p> <p>Currently present as: "Which features are the most valuable for you?".</p> <p>Present in the second part of the feedback and, therefore, not required.</p>
whatWouldChange	string	false	<p>User's feedback into what he/she would change about the application.</p> <p>Currently present as: "If you could change one thing about FightPandemics, what would it be?".</p> <p>Present in the second part of the feedback and, therefore, not required.</p>
generalFeedback	string	false	<p>User's general feedback section.</p> <p>Currently present as: "Any other feedback for us?".</p> <p>Present in the second part of the feedback and, therefore, not required.</p>
covidImpact	string	false	<p>User's feedback into how the COVID impacted him.</p> <p>Currently present as a multiple choice question.</p> <p>Question: "How has COVID-19 impacted you?"</p> <p>Options:</p> <ol style="list-style-type: none"> 1. I go to work/school normally 2. I am healthy but in a stay-at-home quarentine 3. I have mild symptoms but haven't been tested 4. I am diagnosed with COVID-19 <p>Present in the second part of the feedback and, therefore, not required.</p>

				required.	
userId	objectId	false		Reference to the user's <code>_id</code> . This will be present only if the user was logged in when completing the feedback.	
location	document	false		Location document according to the norms of a GeoJSON Object . The fields address, neighborhood, city, state and country are added to store the result of the geoprocessing.	
coordinates	array	true		Array with the coordinates, specifying longitude first and latitude second , as default in the GeoJSON definition.	
[0]	numeric	false		Location longitude	
[1]	numeric	false		Location latitude	
type	string	true		Type of the GeoJSON Object. Please refer to the official documentation for more information. In our case, the value will always be of the type "Point".	
country	string	false		String holding the country's name.	
city	string	false		String holding the city's name.	
neighborhood	string	false		String holding the neighborhood's name.	
address	string	false		String holding the address (street, number and other details).

2.1.2.3.3 posts Fields

FIELD	TYPE	REQ	KEY	DESCRIPTION	COMMENTS
_id	objectId	true			
createdAt	date	true		Timestamp with the post's creation date	
updatedAt	date	true		Timestamp with the post's last update date	
expireAt	date	false		Timestamp with the date the post will expire. If no expiration date is present, the post does not expire.	
author	document	true			
id	objectId	true		Foreign key to the user who created the post.	
name	string	true			
type	string	true			
				Location document according to the norms of a GeoJSON Object .	

location	document	true		The fields address, neighborhood, city, state and country are added to store the result of the geoprocessing.	
coordinates	array	true		Array with the coordinates, specifying longitude first and latitude second , as default in the GeoJSON definition.	
[0]	numeric	false		Location longitude	
[1]	numeric	false		Location latitude	
type	string	true		Type of the GeoJSON Object. Please refer to the official documentation for more information. In our case, the value will always be of the type "Point".	
country	string	false		String holding the country's name.	
city	string	false		String holding the city's name.	
neighborhood	string	false		String holding the neighborhood's name.	
address	string	false		String holding the address (street, number and other details).	
title	string	true		The post title.	
content	string	true		String for the post content.	
objective	string	true		Field to indicate the post's objective. Currently only two values allowed: "offering help" and "looking for help".	
visibility	string	true		Field to specify the post's visibility. It can be: worldwide, country, state and zipcode.	
likes	array	true		Array holding the user_id of all the users who liked the post.	
[0]	objectId	false		_id of the user who liked the post	
types	array	false		Array with the post's tags. Can be: Medical Supplies, Groceries/Food, Business, Education, Legal, Wellbeing/Mental, Entertainment, Information, Funding, R&D and Others	
[0]	string	false			
language	array	false			
[0]	string	false			
externalLinks	document	false			
email	string	false		An email related to the post's content.	
website	string	false		Link for a website related to the post's content.	
playStore	string	false		Link for a Play Store application related to the post's content.	
appStore	string	false		Link for a AppStore application related to the post's content.

2.1.2.4.3 users Fields

FIELD	TYPE	REQ	KEY	DESCRIPTION	COMMENTS
_id	objectId	true		Automatically generated _id as primary key.	
createdAt	date	true		Timestamp with the user's creation date	Thu Apr 16 2020 04:59:24 GMT-0300 (Horário Padrão de Brasília): changed the name to registeredAt
updatedAt	date	true		Timestamp indicating last update on the database.	
authId	string	true		String holding the authentication service id (Auth0). This field is a foreign key to the user in the Auth0 database , connecting through the user_id field.	
location	document	false		Location document according to the norms of a GeoJSON Object . The fields address, neighborhood, city, state and country are added to store the result of the geoprocessing.	
coordinates	array	true		Array with the coordinates, specifying longitude first and latitude second , as default in the GeoJSON definition.	
[0]	numeric	false		Location longitude	

[1]	numeric	false		Location latitude	
type	string	true		Type of the GeoJSON Object. Please refer to the official documentation for more information. In our case, the value will always be of the type "Point".	
country	string	false		String holding the country's name.	
city	string	false		String holding the city's name.	
neighborhood	string	false		String holding the neighborhood's name.	
address	string	false		String holding the address (street, number and other details).	
about	string	false		Small self-introduction, limited to 100 char	
photo	uri	false		URI with the location of the profile's photo.	
oneOf	choice	false			
subschema	subschema	false		Subschema representing a individual account.	
type	string	true			
firstName	string	true		The first name of the user	
lastName	string	false		The last name of the user. Optional field.	
needs	document	true		User's need in the app, representing what kind of help he/she needs	
medicalHelp	boolean	true		Flag to indicate wheter the user needs medical help. Marking this indicates he shows symptoms of COVID-19.	
otherHelp	boolean	true		Flag to indicate wheter the user needs non-medical help, such as getting groceries, medicine and etc..	
objectives	document	false		Document with what are the objectives of the user through the application, such as donating, volunteering or sharing information.	
volunteer	boolean	true		Flag to indicate wheter the user wants to volunteer for initiatives through the app.	
donate	boolean	true		Flag to indicate wheter the user wants to donate for initiatives through the app.	
shareInformation	boolean	true		Flag to indicate wheter the user wants to share information through the app.	

urls	document	false		Document holding the user urls to external websites and social networks	
facebook	uri	false		URL to user's Facebook page.	
linkedin	uri	false		URL to user's Linkedin page.	
twitter	uri	false		URL to user's Twitter page.	
github	uri	false		URL to user's Github page.	
website	uri	false		URL to user's personal website.	
subschema	subschema	false		Subschema representing an organization (collective) account.	
type	string	true		The type of the organization. Can be: Community, Government, Health care provider, Non-profit, Other, R&D, Startup, Traditional Company and University. All names are store in lowercase only.	
industry	string	true		Industry from which the organization participates. Plan is for this values to be scraped from linkedin industries.	
ownerId	objectId	true		_id of the user who owns the organization.	
name	string	true		Organization's name.	
needs	document	true		Document with what are the objectives of the organization through the application, such as finding volunteers, staff, investors and donors.	
volunteers	boolean	true		Flag to indicate wheter the organization is seeking volunteers through the app.	
donations	boolean	true		Flag to indicate wheter the organization is seeking donations through the app.	
staff	boolean	true		Flag to indicate wheter the organization is seeking staff through the app.	
other	boolean	true		Flag to indicate wheter the organization is seeking other needs through the app.	
global	boolean	false		Flag to indicate wheter this organization is global.	
urls	document	false		Document holding external urls and refs to the organization such as social media profiles.	
linkedin	uri	false		URL to organization's Linkedin page.	
twitter	uri	false		URL to organization's Twitter page.	

website	uri	false		URL to organization's website.	
playstore	uri	false		URL to organization's page at Google Play Store.	
appstore	uri	false		URL to organization's page at Apple App Store	
language	string	false		Field to indicate the language used by the organization.	
anyOf	choice	false			
subschema	subschema	false		Case where the user comes from social networks with a registration that uses email. In this case, the email field is required. This case covers the great majority of currently supported social network authentications.	
email	email	true		User's email validated by a regex pattern.	
subschema	subschema	false		Case where the user comes from social networks with a registration that allows the use of only the phone. In this case, the phone field is required, and the email isn't. An example of ocial network that falls into this case is Twitter.	
phone	string	true

3. RELATIONSHIPS

3.1 Relationship PostHasComments

3.1.1 PostHasComments Diagram

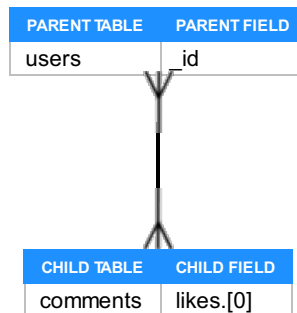

3.1.2 PostHasComments Properties

PROPERTY	VALUE
Name	PostHasComments
Description	Relationship between a Post and it's respective Comments made at it.
Parent Collection	posts
Parent field	_id
Parent Cardinality	1
Child Collection	comments
Child field	postId
Child Cardinality	n
Comments	

3.2 Relationship UserLikesComment

3.2.1 UserLikesComment Diagram

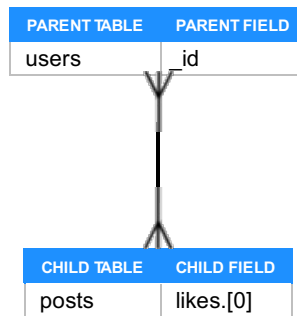

3.2.2 UserLikesComment Properties

PROPERTY	VALUE
Name	UserLikesComment
Description	Relation to represent the User's who liked a Comment. Even though this is a N-N relation, we opt to store the ids only at the Comment side as an array of _id (with the _id of the users who liked it).
Parent Collection	users
Parent field	_id
Parent Cardinality	n
Child Collection	comments
Child field	
Child Cardinality	n
Comments	

3.3 Relationship UserLikesPost

3.3.1 UserLikesPost Diagram

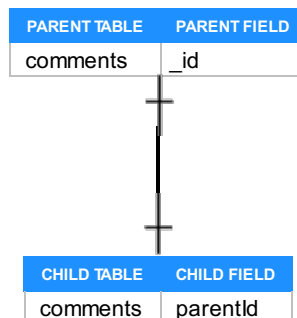

3.3.2 UserLikesPost Properties

PROPERTY	VALUE
Name	UserLikesPost
Description	Relation to represent the User's who liked a Post. Even though this is a N-N relation, we opt to store the ids only at the Post side as an array of _id (with the _id of the users who liked it).
Parent Collection	users
Parent field	_id
Parent Cardinality	n
Child Collection	posts
Child field	
Child Cardinality	n
Comments	

3.4 Relationship fk comments._id to comments.parentId

3.4.1 fk comments._id to comments.parentId Diagram

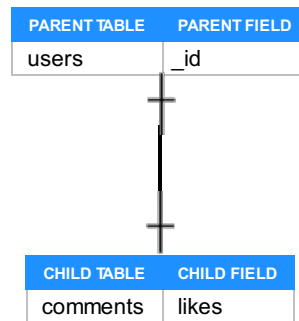

3.4.2 fk comments._id to comments.parentId Properties

PROPERTY	VALUE
Name	fk comments._id to comments.parentId
Description	
Parent Collection	comments
Parent field	_id
Parent Cardinality	1
Child Collection	comments
Child field	parentId
Child Cardinality	1
Comments	

3.5 Relationship fk users._id to comments.likes

3.5.1 fk users._id to comments.likes Diagram

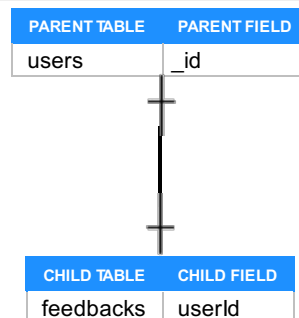

3.5.2 fk users._id to comments.likes Properties

PROPERTY	VALUE
Name	fk users._id to comments.likes
Description	
Parent Collection	users
Parent field	_id
Parent Cardinality	1
Child Collection	comments
Child field	likes
Child Cardinality	1
Comments	

3.6 Relationship fk users._id to feedbacks.userId

3.6.1 fk users._id to feedbacks.userId Diagram

3.6.2 fk users._id to feedbacks.userId Properties

PROPERTY	VALUE
Name	fk users._id to feedbacks.userId
Description	
Parent Collection	users
Parent field	_id
Parent Cardinality	1
Child Collection	feedbacks
Child field	userId
Child Cardinality	1
Comments	

3.7 Relationship fk users._id to organizations..organization.ownerId

3.7.1 fk users._id to organizations..organization.ownerId Diagram

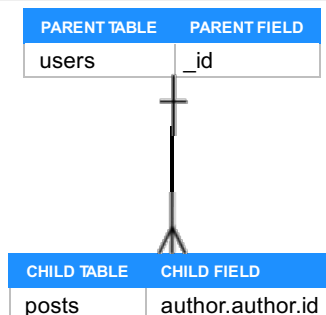

3.7.2 fk users._id to organizations..organization.ownerId Properties

PROPERTY	VALUE
Name	fk users._id to organizations..organization.ownerId
Description	Relation between an User and an Organization created by him/her. Initially projected as 1-N, with only one User owning the Organization, it is though to later on be evolved into N-N, with many Users being able to manage the Organization with different roles.
Parent Collection	
Parent field	_id
Parent Cardinality	1
Child Collection	
Child field	
Child Cardinality	n
Comments	

3.8 Relationship fk users._id to posts..author.authorId

3.8.1 fk users._id to posts..author.authorId Diagram

3.8.2 fk users._id to posts..author.authorId Properties

PROPERTY	VALUE
Name	fk users._id to posts..author.authorId
Description	Relation between a User and the Post created by him/her.
Parent Collection	users
Parent field	_id
Parent Cardinality	1
Child Collection	posts
Child field	id
Child Cardinality	n
Comments
